

Strain localization and shear zone formation at the brittle-viscous transition, Cap de Creus, Spain

Verformungslokalisierung und Scherzonenbildung
am spröde-viskosen Übergang, Cap de Creus, Spanien

Florian C. Fußeis

Dissertation zu Erlangung des Doktorgrades
im Fachbereich Geowissenschaften an der
Freien Universität Berlin

Berlin, Oktober 2006

Promotionskommission:

Betreuer	Prof. Dr. Mark R. Handy, FU Berlin (Erstgutachter)
	Prof. Dr. Onno Oncken, FU Berlin (Zweitgutachter)
	PD Dr. Neil Mancktelow, ETH Zürich
	Prof. Dr. Rainer Abart, FU Berlin
	Dr. Sebastian Garcia, FU Berlin
	Dipl.Min. David van Acken, FU Berlin

Die Disputation der Arbeit fand am 19.12.2006 statt.

Mein Lebenslauf wird aus Datenschutzgründen in der elektronischen Version meiner Arbeit nicht mit veröffentlicht.

Selbstständigkeitserklärung

Hiermit versichere ich, dass ich die vorliegende Arbeit selbstständig verfaßt, und keine anderen als die angegebenen Hilfsmittel benutzt habe. Die Stellen der Arbeit, die anderen Werken wörtlich oder inhaltlich entnommen sind, wurden durch entsprechende Angaben der Quellen kenntlich gemacht. Diese Arbeit hat in gleicher oder ähnlicher Form noch keiner Prüfungsbehörde vorgelegen.

Florian Füsseis, Berlin, Januar 2007

Contents

1	Preamble	1
1.1	What is the dissertation about?	1
1.2	Structure of the work	2
1.3	Scientific manuscripts	2
2	Introduction	5
2.1	Abstract	5
2.2	Kurzfassung	7
2.3	Introduction	9
2.3.1	Scientific framework of this thesis	11
3	Networking of shear zones at the brittle-viscous transition (Cap de Creus, NE Spain)	15
3.1	Abstract	15
3.2	Introduction	16
3.3	Geological setting	17
3.4	Shear zone nucleation and growth	20
3.4.1	Strain localization within fractures	21
3.4.2	Shear zone nucleation and propagation	23
3.4.3	Shear zone interconnection and strain homogenization	27
3.5	Discussion and interpretation	33
3.5.1	Evidence for a strain dependent BVT	33
3.5.2	A model for the formation, propagation and network- ing of shear zones at the BVT	35
3.5.3	Bulk kinematics and scales of strain localization . . .	39
3.5.4	Implications for crustal strength at the BVT	41
3.6	Conclusions	42
3.7	Acknowledgements	43

4	Strain localization the brittle-viscous transition (Cap de Creus, NE Spain)	45
4.1	Abstract	45
4.2	Introduction	46
4.3	Geological background	48
4.4	Isolated mylonitic shear zones	49
4.4.1	Fabrics in unsheared rocks	50
4.4.2	Distributed deformation	53
4.4.3	Intragranular scale strain localization	55
4.4.4	Strain localization on the transgranular scale	57
4.5	Discussion	59
4.5.1	Combined fracturing and mylonitic shearing	59
4.5.2	Fracture propagation and the role S1/2	64
4.5.3	A model for the strength evolution of a mylonitic shear zone at the BVT	67
4.6	Conclusions	69
4.7	Acknowledgements	71
5	Interconnecting Shear Zones	73
5.1	Abstract	73
5.2	Introduction	74
5.3	Macroscale observations	76
5.3.1	F-type shear zones	76
5.3.2	UM-type shear zones	77
5.3.3	M-type shear zones	79
5.4	Microscale observations	82
5.4.1	Microscale observations from UM-type shear zones	82
5.4.2	Geothermometry of UM-type shear zones	91
5.4.3	Microscale observations from M-type shear zones	93
5.4.4	Paleopiezometric data from M-type shear zones	97
5.5	Discussion	100
5.5.1	Deformation in UM-type shear zones	100
5.5.2	Grain size-sensitive creep in step-over shear zones	102
5.6	Summary and Conclusions	107
5.7	Acknowledgements	108

6	Multiscaling of Shear Zones	109
6.1	Abstract	109
6.2	Introduction	110
6.3	Scaling parameters of shear zones	113
6.3.1	The Strain Localization Factor (LfRA)	113
6.3.2	The Strain Intensity Factor (Iloc)	115
6.4	Scaling of Cap de Creus shear zones	119
6.4.1	Geology of the shear zones	119
6.4.2	Determination of LfRA for different scales	121
6.5	Interpretation and discussion	124
6.5.1	The role of mechanical anisotropies	125
6.5.2	The effects of strain and kinematics	130
6.5.3	Do shear zones soften or harden during upscaling?	134
6.6	Summary and Conclusions	136
6.7	Acknowledgements	138
7	Summary and Implications	139
7.1	Summary	139
7.1.1	Strain localization	139
7.1.2	The formation of decameter-wide shear zones	142
7.1.3	Multiscaling of shear zones	144
7.2	Scientific implications	146
8	References	151
9	Appendix	173
9.1	Terminology	173
9.2	Quantifying γ_{max} in shear zone centers	176
9.3	Sample descriptions	178
9.4	Element distribution maps to Fig. 4.11	180
9.5	Figure- and sample locations	181
9.6	Measurement of shear zones	182
9.7	Determination of the representative area (RA)	182
9.8	Determining ϕ_{mi} with ACF	183
9.9	Thresholding of ACF data	186
9.10	Robustness of RA determinations	187
9.11	Thermometry of UM-type shear zones	191

List of Figures

2.1	Heterogeneous strain	10
3.1	Structural map of the Cap de Creus	18
3.2	Pre-existing structures	20
3.3	Shear fracture	21
3.4	Linked shear fractures	22
3.5	Shear zone termination	24
3.6	Displacement/distance plot to Fig. 3.5	25
3.7	Shear zone network, SE Cala Serena valley	26
3.8	Slip line analysis	27
3.9	Juvenile step-over shear zone	30
3.10	Mature step-over shear zone	32
3.11	Shear zone widening	34
3.12	Mature lozenge	37
3.13	Mature pattern of interconnected shear zones	38
3.14	Model for the evolution of shear zone networks	40
4.1	Schematic model of shear zone networking	50
4.2	Shear zone termination	51
